

WHEN  
EVERY  
CONNECTION  
COUNTS.

**ALLERIUM**  
A COMTECH SEGMENT

# Built for What Matters Most

Allerium, a Comtech segment, is a trusted leader in mission-critical connections, backed by over 40 years of proven performance in public safety. We design technologies that connect calls, teams, and communities, quietly powering the moments where response starts.

From PSAPs to statewide networks, our solutions help agencies respond faster, route smarter, and adapt to the demands of modern emergency communication. Whether it's voice, text, video, or data, we help public safety teams stay focused and in control when every second counts.

Our platforms include intuitive tools like Guardian and Mira, anchored by a public safety-grade ESInet built to meet the demands of regional and statewide communities. Behind it all is a resilient, security-first foundation designed for uptime, scalability, and full NG9-1-1 readiness. From call handling to core systems, we give agencies the confidence to respond and evolve. Because in public safety, there's no room for compromise.

# From Proven Platforms to Next-Gen Possibilities

Allerium's call handling platforms are trusted by thousands of agencies across North America and around the world. Built on decades of experience in emergency communications, our systems are reliable, flexible, and ready to meet each agency's unique needs.

## **Guardian – Evolving, Ready Now**

Allerium Guardian remains a vital solution for PSAPs of all sizes. IP-based from the start, it continues to evolve with features that support multimedia, AI, and automation, like real-time transcription, abandoned call detection, and picture/video handling through our Messenger feature. Guardian offers continuity today and a path to what's next.

## **Mira – Our Next Leap Forward**

Allerium Mira is our new, cloud-native platform built to simplify complexity and deliver smarter, faster responses. With a clean interface, multimedia support, and AI-enabled tools, Mira gives telecommunicators the power to respond with clarity and confidence. When paired with our ESInet, it delivers full-stack integration, intelligent routing, and unmatched performance, all with flexible deployment and rapid onboarding.

## **NG9-1-1 Starts with a Stronger Core**

Reliable response begins at the network level. Allerium's core services are purpose-built for public safety, with high availability, industry-leading security, fault-tolerant design, and seamless interoperability across the NG9-1-1 ecosystem. From location delivery to call routing, our infrastructure is NENA i3-compliant and proven in live environments across entire states and regions.

Allerium is the second-largest NGCS provider in North America and a leading operator of public safety-grade ESI-nets. Our networks support voice, text to 9-1-1, video, and data, delivering the flexibility PSAPs need as communication channels evolve. With dynamic location routing using enhanced geospatial data, we help agencies reach people faster, even in rural or complex environments. And with security threats growing, we're setting a new standard for cybersecurity across our services.

At Allerium, we know that behind every call for help is a person relying on a fast, clear, and dependable response. Whether it's a request for help, a route through our network, or the infrastructure behind it all, we focus on what matters most: supporting the people who protect and provide.

When Every Connection Counts.
